## Source coverage

- YouTube: cumulative per-video metrics through 2026-09-10; 55 included long-form videos and 478 included Shorts.
- YouTube subscriber metric: sum of the source-reported Subscribers column across included videos. The workbook says not to relabel it as Subscribers gained; it is not the current channel subscriber total.
- YouTube exclusions retained in the source workbook but omitted from dashboard analysis: aggregate rows, rows without a publish date, and rows outside 2026.
- The source workbook has cached #VALUE! cells in weekly delta columns for blank weeks. The dashboard does not use those formulas; it recomputes from included raw rows.
- Instagram: Meta Business Suite export through Aug 26, 2026; 582 reviewed posts.
- TikTok: per-post export through Aug 27, 2026; 563 reviewed posts.
- X: combined analytics export and scrape through Aug 26, 2026; 969 authored posts; reposts excluded.
- The headline reporting week is based on common cross-platform coverage through 2026-08-26; individual source freshness differs.
